                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          88

These can be used in the detection, monitoring and treatment of prostate diseases, particularly prostate cancer. The present sequence is a PS118 protein fragment of the invention. The coding sequences of the invention were isolated from a prostate tissue expressed sequence tag (EST) library.

PS118 polypeptides, polynucleotides, antibodies, agonists and inhibitors are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing and treating (including by genetic immunisation), or determining the predisposition of an individual to, diseases and conditions of the prostate, such as benign prostatic hyperplasia, prostatitis, prostatic intraspithelial neoplasia, prostate cancer, tumours and metastases. The PS118 polypeptides can be produced by expression of PS118 polymented in transfected host cells, and immunogenic peptides are useful for raising PS118-specific antibodies of diagnostic use. The methods and resgents of the antibodies of diagnostic use. The methods and resgents of the contraction of the contract
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Detecting presence of target PS118 polynucleotide in test sample, useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing or treating or determining predisposition to prostate

The clones were identified from a cDNA library made from prostate tumour tissue. Recombinant PS118 protein is used to detect PS118-specific antibodies, to raise antibodies for detection of PS118 antigens, to screen for specific binding agents (potential therapeutics, and to isolate specific antibodies from serum. Detection of PS118 protein or nucleic acid, which are prostate related, and altered or elevated in prostatic disease, is used for detection, diagnosis, staging, monitoring and prognosis of prostatic disease, particularly cancer, and to identify subjects at

These can be used in the detection monitoring and treatment of prostate diseases, particularly prostate cancer. The present sequence is a PS118 protein fragment of the invention. The coding sequences of the invention were isolated from a prostate tissue expressed sequence tag (BST) library.
            Detecting presence of target PS118 polynucleotide in test sample, useful for detecting, diagnosing, staging, monitoring, prognostic preventing or treating or determining predisposition to prostate disease -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC (see ABA91651), and lacking the N-terminal region. The PSI18
CC consensus sequence is found at least 12 times more often in
CC prostate than in non-prostate tissue. PSI18 polypeptides,
including derivatives of the present sequence, polypucleotides,
CC antibodies, agonists and inhibitors are useful for detecting,
CC diagnosing, staging, monitoring, prognosticating, preventing and
CC treating (including by genetic immunisation), or determining the
CC predisposition of an individual to, diseases and conditions of the
CC prostate, such as benign prostatic hyperplasia, prostate cancer, tumours and
CC prostatic intraepithelial neoplasia, prostate cancer, tumours and
CC prostatic intraepithelial neoplasia, prostate cancer, tumours and
CC of PSI18 polymetides in transfected host cells. The methods
CC and reagents of the prostate and may also provide new markers
CC which can differentiate between the clinically important and
CC unimportant prostate cancers without the use of surgery.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
The invention relates to isolated polynucleotide (I) and the invention probes, (I) is useful as hybridisation probes, and for chromomers.
                                                                                                                                                                                                                                                                                       New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodication.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Drmanac RT,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              31-MAR-2000;
